- identify records
- categorise records
- link records
- create stories
- share to a global audience
- income
- support

What is DigiClerk?

A software as a service (SaaS) business that allows customers to scan and upload records themselves. Once uploaded onto the platform, records are identified, categorized and can be linked with existing internal records or external records. The results are the details of an event surrounding a person, a person's timeline, a person's geographical timeline and a family tree.

FORM B
No. 7

BRITISH LEGION
(INCORPORATED BY ROYAL CHARTER)

BRANCH APPLICATION No.

A Morfett Signed

Documentary evidence of service particulars should be produced with this application.

The Royal British Legion has a wealth of information contained in its archives, illustrated by this membership application form. Once this record is uploaded it can be linked with all other records associated with this person, a military unit, an abode, a graveside, a date...the stories will unfold.

Income from our records?

Once DigiClerk has a sufficient volume of records and subscribing members then subscribing Members will earn a share in monthly subscriptions related to the volume of their records.

DigiClerk has a limited number of template upload forms. These simplify the uploading and enable machine learning and artificial intelligence to be developed. They are: birth, marriage, death, burial, graveside and archive. If there is a sufficient volume of a type of record to be uploaded (e.g. RBL membership records) then a dedicated form can be developed.
